

Pressing for Excellence

PRESS RELEASE

VEIT Group presents product highlights and new product innovations at EXPODETERGO 2022.

Landsberg am Lech, August 2022. At the Expodetergo in Milan/Italy (21 – 24 October 2022, Hall 3, Booth M22), the VEIT Group will present product highlights and new product innovations from the ironing technology sector on 104 m².

In line with the company slogan "Pressing for Excellence", the VEIT GROUP has invested a lot of time in the further development of products and worked on new, innovative solutions in the last two years. "Finally, this year we have the opportunity to participate in public events and trade fairs again and to present our highlights, like now at the Expodetergo", Managing Director Günter Veit is pleased. The product spectrum ranges from the classic ironing table with iron and steam generator to presses and finishers to Pants Finisher and Tunnel Finishers. The motto of the trade show is "LOVEIT." "LOVEIT stands for the passion we put into the development of our products, the love for perfection and the dedication to our customers".

In conjunction with this motto and the product presentation in hall 3, booth M22, the latest VEIT developments will be presented and thus celebrates its premiere in the Textile Care industry:

- **Compact Finisher CF 20: Space-saving finish thanks to compact size**

The proven VEIT Tunnel Finisher has been optimized for small to medium-sized businesses and adapted to size. A great opportunity for customers for automated finishing of smaller quantities of garments. "In textile care, there are more and more staff shortages worldwide. Competition is increasing and cost pressure is rising. It is becoming increasingly difficult to find appropriate personnel," describes Günter Veit. "With the CF 20, customers benefit from great time savings, due to the automated process, and can thus partially compensate for staff shortages." The new CF 20 is very easy to integrate into existing processes and ensures efficient workflows. The clocked process enables a fantastic finish results.

VEIT presents the new SF 27 Shirt Finisher for the first time:

- **Shirt Finisher SF 27: high performance Shirt Finisher with heat recovery system**

During the development of the new SF 27 Shirt Finisher, VEIT worked together with fluidic engineers and specialists in the field of emission optimization. With the new model, VEIT has succeeded in further improving both the quality of the finished shirt and the functionality and ergonomics of the Shirt Finisher. Emission values such as energy consumption, noise and heat generation have been significantly reduced. The high-performance Shirt Finisher is ideal for textile care businesses and laundries with a high volume of shirts.

The heat recovery system, equipped with the latest heat exchange technology, provides the user with a good working environment. The technical components have been additionally integrated into the unit. As a result, the machine's floor space requirement remains the same. The optimized energy recovery contributes to a positive working experience and promotes your ecological footprint. Fast, economical drying times and a high-quality finishing result with the lowest energy consumption are our claim.

"Providing our customers with solutions that allow them to address staff shortages with automation without losing application quality is one of VEIT Group's corporate philosophies. And all this with as few emissions (energy, temperature and noise) as possible," explains Sascha Oehl, Director Product and Innovation.

The presentation of new products will be complemented by a comprehensive performance show of established VEIT product highlights:

- **Double leg trouser press 8940: For all companies with a high volume of pants**

The easy use and ergonomic operation of the press are unique. After a short training period, the operator can finish up to 40 pants per hour. The upper press plate moves with two closing movements, this increases the insertion

Pressing for Excellence

area during positioning. The operator thus has an optimum view of the trousers. There is an even distribution of pressure over the whole pressing area. Ergonomic and fatigue-free working is guaranteed.

- **Pants Finisher 8741: Finishing of short and long pants and also skirts**

The patented belt drive ensures precise stretching of the pants and is therefore particularly suitable for processing wet-cleaned pants. A powerful but energy-efficient blower even allows the process from wet to dry. The inner hem tensioner prevents pressure points on sensitive materials. The function for shorts also allows finishing of women's skirts. Optionally, the Pants Finisher is available as a longitudinal or lateral tensioner to suit the body shape. The unit is optionally available with a built-in steam generator.

- **Multiform Classic 8363: For finishing of sports, leisure, jeans jackets and leisure coats**

The VEIT 8363 multiform series was developed with decades of experience in textile care. Both models (Basic and Classic) allow the finishing of outerwear in all common clothing sizes with a length between 620 and 1420 mm (820-1620 mm with adapter) and a hem circumference between 940 and 1660 mm.

The VEIT Multiform Finisher Classic impresses with its unique belt drive. This means easy and gentle running of the tensioning unit and exact stretching during the finishing process. Pneumatic side slit clamps can be added for trouble-free and impression-free finishing of jackets with side slits.

The machine is also optionally available with a built-in steam generator.

- **Collar & Cuff press 8905: The space-saving solution for finishing collars and cuffs**

The three-head press with its specially shaped upper form gives an excellent finish result. The vertical closing movement is triggered by a foot switch. The soft cover system prevents unwanted impressions and broken buttons. The compact design saves space in your company.

- **Universal Finisher 8319: For finishing shirts, polo shirts, smocks, jackets and sack coats**

This machine scores points above all for its versatility. It is equally suitable for finishing blouses and shirts as well as sports jackets and coats. The pneumatic sleeve tensioners for short and long sleeved shirts allow impression-free finishing. The powerful hot air blower ensures very short drying times with good quality. Thanks to the exchangeable lapel tensioners, the finisher can be completely adapted to your individual needs. On request, the unit is also available as an electrically heated 8319 E version.

- **Ironing station Varioset CR2: The benchmark in professional textile care**

More than 65 years ago, VEIT introduced the first ironing board with the so-called cold ironing technology. Here, the ironing surface is not heated and enables fast ironing with a top finish. The ironing table series Varioset and Varioline has set the standard for suction and blowing ironing tables all over the world.

The variable suction and blowing ironing station VEIT Varioset CR2 can be easily integrated into any operating sequence. On the special ironing surface, all garments can be processed easily, efficiently and with a high quality standard. And all this on only about 2 m² floor space. The electronic control unit lets you quickly determine the suction and blowing power at the touch of a button. The set and actual temperature of the iron is displayed to the nearest degree.

Optionally, this is also available with a inflated egg-shaped buck at the tip, which is particularly suitable for ironing pieces with width, e.g. in the bust area.

The combination of the powerful blower and the plastic ironing surface effectively prevents condensation. This makes it possible to dispense with an ironing surface heating, resulting in significant energy savings of up to 60% compared to heated ironing tables. In addition, you get a better ironing result.

Pressing for Excellence

About VEIT Group: The VEIT Group, headquartered in Landsberg am Lech (Germany), is the world's leading manufacturer of machinery and equipment in the field of ironing technology, fusing, pressing and preparation of garments. The product range extends from the classic ironing table to ironing presses and fusing machines to automated systems such as tunnel finishers and packaging machines.

For over 65 years, VEIT Group products have stood for outstanding quality and maximum productivity. For this reason, garment manufacturers, but also textile processors, logistics companies, textile care and automotive customers rely on VEIT technology. With numerous international subsidiaries and an excellent sales network, the VEIT Group is on a growth course worldwide.
